TITEN®2 SCREW ANCHORS FOR USE IN MASONRY

CSI Division: 04 00 00—MASONRY
CSI Section: 04 05 19.16—Masonry Anchors

1.0 SCOPE OF EVALUATION

1.1 Compliance to the following codes & regulations:

1.2 Evaluated in accordance with:
- ICC-ES Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry (AC106)

1.3 Properties assessed:
- Structural

2.0 PRODUCT USE

Simpson Strong-Tie® Titen®2 Screw Anchors are used to resist static tension and shear loads in grouted or ungrouted concrete masonry construction. The anchoring system is an alternative to cast-in-place anchors described in Section 2107.1 of the IBC and Section 8.1.3 of the 2016 TMS 402 or Section 8.1.3 of the 2013 TMS 402/ACI 530/ASCE 5 or Section 2.1.4 of the 2011, 2008 and 2005 TMS 402/ACI 530/ASCE 5, as applicable. The anchors may also be used where an engineered design is submitted in accordance with Section R301.1.3 of the IRC.

3.0 PRODUCT DESCRIPTION

3.1 Titen®2 Screw Anchors

The Titen®2 Screw Anchors are post-installed anchors that derive their holding strength from the mechanical interlock of the screw anchor threads with the grooves cut into the masonry by the screw anchor during installation. The screw anchors are manufactured from carbon steel that is given a supplementary hardening process. The screw anchors are available in nominal sizes of 3/16 inch and ¼ inch (4.8 mm and 6.4 mm) diameters and in a variety of lengths.

The Titen®2 Screw Anchors are available with either a slotted hex head or a Philips flat head as shown in Figure 1 of this report. All Titen®2 Screw Anchors are provided with a Ruspert coating.

3.2 Materials

3.2.1 Concrete Masonry Units (CMU’s): CMU’s shall be medium-weight or normal-weight conforming to ASTM C90. Minimum allowable nominal size of the CMU shall be 8 inches (203 mm) wide by 8 inches (203 mm) high by 16 inches (406 mm) long (i.e. 8x8x16).

3.2.2 Grout: Grout shall comply with 2018 and 2015 IBC Section 2103.3, 2012 IBC Section 2103.15, 2009 and 2006 IBC Section 2103.12 or 2018 and 2015 IRC Section R606, or 2012, 2009 and 2006 IRC Section R609.1.1, as applicable. Alternatively, the grout shall have a minimum compressive strength when tested in accordance with ASTM C1019 equal to its specified strength, $f'_c$, but not less than 2,000 psi (13.8 MPa).

3.2.3 Mortar: Mortar shall be minimum Type N in compliance with IBC Section 2103 or 2018 and 2015 IRC Sections R606.2.8 and R606.2.7, respectively, or R607 (2012, 2009 and 2006 IRC), as applicable.

4.0 DESIGN AND INSTALLATION

4.1 Design

4.1.1 General: Titen®2 Screw Anchor capabilities in this report are allowable load values for use in allowable stress design as set forth in Section 2107 of the IBC. For use under the IRC, an engineered design in accordance with Section R301.1.3 of the IRC shall be submitted to the code official for approval.

4.1.2 Design of Titen®2 Screw Anchors Installed in Concrete Masonry: Titen2 Screw Anchors are limited to installation in the face shell of the grouted or ungrouted concrete masonry units. Allowable tension and shear values, embedment depths, spacing requirements, end and edge distances for screw anchors installed in fully-grouted concrete masonry unit construction are noted in Tables 3 and 4 of this report. Allowable tension and shear values, embedment depths, spacing requirements, end and edge distances for screw anchors installed in ungrouted concrete masonry unit construction are noted in Tables 5 and 6 of this report.

Allowable loads for the Titen®2 Screw Anchors installed in the face shell of the grouted or ungrouted concrete masonry units subjected to combined tension and shear forces shall be determined by the following equation:
(P/P_{s}) + (V_{s}/V_{t}) \leq 1.0

Where:
- \( P_{s} \) = Applied service tension load.
- \( P_{t} \) = Allowable service tension load.
- \( V_{s} \) = Applied service shear load.
- \( V_{t} \) = Allowable service shear load.

4.2 Installation

Installation parameters are provided in Table 2 and Figure 2 of this report. The Titen®2 Screw Anchors shall be installed in accordance with the manufacturer’s published instructions and this report. Screw anchor locations shall comply with this report and the plans and specifications approved by the code official. Screw anchors shall be installed in holes drilled using carbide-tipped drill bits conforming to ANSI B212.15-1994 and Table 2 of this report. The hole shall be drilled to the minimum depth noted in Table 2 of this report, or completely through the face shell in the case of ungrouted masonry. Dust and debris in the hole shall be removed by using oil-free compressed air or a vacuum. The screw anchor shall be driven into the predrilled hole using a hammer drill set in the hammer and rotation mode with a Titen Screw Installation Tool and drive socket.

4.3 Special Inspection

Periodic special inspection is required in accordance with 2018 and 2015 IBC Section 1705.4, 2012 IBC Section 1705.3, 2009 IBC Section 1704.15 or 2006 IBC Section 1704.13, provided the masonry construction has quality assurance requirements as specified in Tables 3 and 4 of TMS 602-16 Section 1.6 (2018 IBC), Section 3.1 of TMS 402-13 (2015 IBC) or Section 1.19 of TMS 402-11 (2012 IBC). Level 1 or Level 2 under Section 1704.5 of the 2009 IBC or Section 1704.5 of the 2006 IBC. The special inspector shall be present as often as required in accordance with the “statement of inspection.” The special inspector shall make periodic inspections during anchor installation to verify anchor type, anchor dimensions, masonry unit type and compliance with ASTM C90, grout and mortar compressive strengths, hole dimensions, hole cleaning procedures, drill bit size, anchor spacing, edge and end distances, anchor embedment and adherence to the installation instructions contained in this report. Additional requirements as set forth in Section 1704, 1705, 1706 and 1707 of the IBC shall be observed, where applicable.

5.0 LIMITATIONS

The Simpson Strong-Tie Titen®2 Screw Anchors described in this report are suitable alternatives to what is specified in the codes listed in Section 1.0 of this report, subject to the following limitations:

5.1 Titen®2 Screw Anchors shall be installed in accordance with the manufacturer's published installation instructions and this report as shown in Figure 2 of this report. Where conflicts between this report and the published instructions occur, the more restrictive shall prevail.

5.2 Screw anchor sizes, dimensions and minimum embedment depths are as set forth in this report.

5.3 Screw anchors shall be installed in holes predrilled with carbide-tipped drill bits complying with ANSI B212.15-1994 in accordance with the installation details shown in Table 2 of this report.

5.4 Under the IBC and IRC, use of the screw anchors to resist wind or seismic loads is beyond the scope of this report. The allowable loads or load combinations for the screw anchors shall not be adjusted for screw anchors subjected to wind or seismic loads.

5.5 Prior to installation, calculations and details demonstrating compliance with this report shall be submitted to the building official. The calculations and details shall be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.

5.6 Since an evaluation criteria for evaluating data to determine the performance of anchors subjected to fatigue or shock loading is unavailable at this time, the use of these anchors under such conditions is beyond the scope of this report.

5.7 Where not otherwise prohibited in the IBC or IRC. Titen®2 Screw Anchors are permitted for installation in fire-resistive construction provided at least one of the following conditions are met.

- Anchors that support gravity load-bearing structural elements are within a fire-resistive envelope or a fire-resistive membrane, are protected by approved fire-resistive materials, or have been evaluated for resistance to fire exposure in accordance with recognized standards.
- Anchors are used to support nonstructural elements.

5.8 Use of screw anchors is limited to dry, interior locations.

5.9 Since acceptance criteria for evaluating the performance of screw anchors in cracked masonry are not available at this time, the use of screw anchors is limited to installation in uncracked masonry. Cracking occurs when \( f_{c} > f_{t} \) due to service loads or deformations.

5.10 Special inspection shall be provided in accordance with Section 4.3 of this report.
5.11 Titen®2 Screw Anchors are manufactured under an approved quality control program with quality control inspections by CEL Consulting (AA-639).

6.0 SUBSTANTIATING DATA

Data in accordance with the ICC-ES Acceptance Criteria for Mechanical Predrilled Fasteners (AC106), approved March 2018. Test results are from laboratories in compliance with ISO/IEC 17025.

7.0 IDENTIFICATION

7.1 Titen®2 Screw Anchors are identified in the field by labels on the packaging, bearing the company name (Simpson Strong-Tie Company, Inc.), product name (Titen2), the anchor diameter and length, catalog number, either IAPMO ES Mark of Conformity as shown below, and the evaluation report number (ER-466). In addition, the ≠ symbol and a length identification code letter are stamped on the head of each screw anchor.

This evaluation report is subject to re-examination in one year.

</tbody>
</table>

For SI: 1 inch = 25.4 mm, 1 lbf. = 4.448 N, 1 psi = 6.895 kPa

1. The tabulated values are for screw anchors installed in minimum 8 inch wide ungrouted concrete masonry walls having reached a minimum \(f_m\) of 1,500 psi at time of installation.
2. Embedment is measured from the masonry surface to the embedded end of the screw anchor.
3. Screw anchors may be installed at any location in the wall face provided the minimum edge and end distances are maintained.

**Figure 1 – Titen®2 Screw Anchors**
Step 1 – Drill a hole in the base material using the proper diameter carbide drill bit to a depth that is 1/2" deeper than the specified embedment depth.

Step 2 – Clean the hole of excess drill fines with compressed air.

Step 3 – Assemble the Titen Installation Tool sleeve and drive socket over the drill bit, and position the anchor in the drive socket.

Step 4 – Drive the anchor through the fixture and into the predrilled hole. The drive socket will automatically disengage from the anchor when the anchor is flush with the fixture.

Figure 2 – Installation Instructions for Titen®2 Screw Anchors
