EVALUATION SUBJECT:
SIMPSON STRONG-DRIVE® SDWC WOOD SCREWS

REPORT HOLDER:
Simpson Strong-Tie Company Inc.
5956 West Las Positas Boulevard
Pleasanton, California 94588
(800) 999-5099
www.strongtie.com

CSI Division: 06 – WOOD, PLASTICS, AND COMPOSITES
CSI Section: 06 05 23 – Wood, Plastic and Composite Fastenings

1.0 SCOPE OF EVALUATION

1.1 Compliance to the following codes & regulations:
• 2018, 2015, 2012 and 2009 International Residential Code® (IRC)
• 2020 City of Los Angeles Building Code (LABC) – attached Supplement
• 2020 City of Los Angeles Residential Code (LARC) – attached Supplement

1.2 Evaluated in accordance with:
• ICC-ES AC233
• ICC-ES AC257

1.3 Properties assessed:
• Structural
• Corrosion Resistance

2.0 PRODUCT USE

The Simpson Strong-Drive® SDWC fasteners described in this report are dowel-type threaded and self-drilling fasteners used for wood-to-wood connections. These fasteners comply with 2018 and 2015 IBC Section 2304.10 (2012 and 2009 IBC Section 2304.9). The fasteners are permitted when an engineered design is submitted in accordance with IRC Section R301.1.3.

The Simpson Strong-Tie Strong-Drive® SDWC15450 may be used where fasteners are required to exhibit corrosion resistance when exposed to adverse environmental conditions and/or in chemically treated wood, which are subject to limitations of Section 5.5 of this report, and are alternatives to hot-dipped-zinc-coated galvanized fasteners with a coating weight in compliance with ASTM A153, Class D. Fasteners with these proprietary corrosion-resistant coatings were evaluated for contact with wood chemically treated with waterborne alkaline copper quaternary, Type (D) (ACQ-D), to a maximum retention level of 0.4 pcf (6.4 kg/m³), which was shown to be more corrosive than Chromated Copper Arsenate, Type C (CCA-C), Micronized Copper Azole (MCA), and Dispersed Copper Azole (μCA-C).

3.0 PRODUCT DESCRIPTION

3.1 General: The SDWC screws (Figure 1 of this report) are fully threaded with rolled threads spaced approximately at 7 threads per inch (0.28 threads/mm) and a type 17 point. The head is a cap-style head with a T-30 recess. The SDWC screws are available in two lengths: 4½ inches and 6 inches (114 mm and 152 mm). The SDWC15600 screws have a clear zinc coating and are acceptable for dry-service conditions, and the SDWC15450 screws have a proprietary black electrocoat applied over a clear zinc undercoating. Table 1 of this report describes the screws recognized in this report including the bending yield strength, tensile strength, and shear strength.

3.2 Materials

3.2.1 SDWC Wood Screws: The SDWC screws are manufactured from C1022 carbon steel complying with ASTM A510. The manufacturing process involves cold-forming followed by heat treatment.

3.2.2 Wood Members: Wood side and main members shall consist of solid-sawn lumber with a specific gravity of 0.42 to 0.55 or structural composite lumber (e.g., LVL, PSL, LSL etc.) shall have a minimum 0.8E for lateral and withdrawal loading. The structural composite lumber shall be recognized in an evaluation report and shall have an equivalent specific gravity of 0.50 minimum for lateral and 0.42 for withdrawal. The combined thickness of the main and side members shall be equal to or greater than the screw length. The side member thickness shall be at least 1.5 inches (38 mm).

Chemicals used to preservative treat wood are limited to the following:
1. Alkaline Copper Quaternary Type D (ACQ-D), with a maximum retention level of 0.4 pcf (6.4 kg/m³).
2. Wood treatments that have been demonstrated to have lower levels of corrosion compared to ACQ-D.

4.0 DESIGN AND INSTALLATION

4.1 Design

4.1.1 General: Reference lateral, withdrawal and pull-through design values in the report are for allowable stress design and shall be multiplied by all applicable adjustment factors specified in the ANSI/AWC NDS to determine adjusted design values, including wet service condition specified in Section 11.3.3 of the ANSI/AWC NDS – 2018 or 2015 (or Section 10.3.3 of the ANSI/AWC NDS – 2012 or...
ANSI/AF&PA NDS – 2005). The fastener strength taken from Table 1 of this report shall not be multiplied by the ANSI/AWC NDS adjustment factors.

Local stresses in connections using multiple fasteners shall be checked in accordance with Section 11.1.2 of ANSI/AWC NDS – 2018 or 2015 (or Section 10.1.2 of the ANSI/AWC NDS – 2012 or ANSI/AF&PA NDS – 2005). Structural members forming the connection shall be designed in accordance with the IBC.

The following requirements shall be observed when designing with the fasteners:

1. The allowable load for a single-screw connection in which the screw is subject to tension is the least of: (a) the reference withdrawal design value given in Table 3 of this report, adjusted by all applicable adjustment factors; (b) the reference head pull-through design value given in Table 3 of this report, adjusted by all applicable adjustment factors; and (c) the allowable screw tension strength given in Table 1 of this report.

2. The allowable lateral load for a single-fastener connection is the lesser of: (a) the reference lateral design value given in Table 2 of this report, adjusted by all applicable adjustment factors, and (b) the allowable screw shear strength given in Table 1 of this report.

3. Connections containing multiple fasteners shall be designed in accordance with Sections 11.2.2 and 12.6 of ANSI/AWC NDS – 2018 or 2015 (or Sections 10.2.2 and 11.6 of ANSI/AWC NDS – 2012 or ANSI/AF&PA NDS – 2005).

4. Where the screws are subjected to combined lateral and withdrawal loads, connections shall be designed in accordance with Section 12.4.1 of ANSI/AWC NDS – 2018 or 2015 (or Section 11.4.1 of ANSI/AWC NDS – 2012 or ANSI/AF&PA NDS – 2005).

5. When designing a connection, the structural members shall be checked for load-carrying capacity in accordance with Section 11.1.2 of ANSI/AWC NDS – 2018 or 2015 (or Section 10.1.2 of the ANSI/AWC NDS – 2012 or ANSI/AF&PA NDS – 2005) and local stresses within the connection shall be checked against Appendix E in the ANSI/AWC NDS to ensure the capacity of the connection and fastener group.

6. When use is in structural composite lumber products, the minimum fastener end and edge distances and spacings shall be in accordance with Table 4 of this report or in accordance with the recommendations of the structural composite lumber manufacturer, whichever is more restrictive.

The SDWC15450 wood screws have corrosion-resistant coatings that are recognized for use in wood members with chemical treatments as set forth in Section 3.2.2 of this report. These fasteners shall be limited to use in applications and limitations defined in Table 5 of this report.

4.1.2 Lateral Design Values: Reference lateral (Z) design values for SDWC wood screws for single shear wood-to-wood connections loaded perpendicular to grain and parallel to grain are shown in Table 3 of this report.

4.1.3 Reference Withdrawal Design Values: Reference withdrawal (W) design values for SDWC wood screws are shown in Table 3 of this report and are given in pounds per inch of thread penetration into the main member.

4.1.4 Pull-through Design Values: Reference pull-through design values for SDWC wood screws are shown in Table 3 of this report and are given in pounds per inch of thread penetration into the side member.

4.2 Installation: The SDWC wood screws shall be installed in accordance with the manufacturer’s installation instructions, the evaluation report, and the codes listed in Section 1.1 of this report. Installation may be performed without pre-drilling wood members. Edge distances, end distances and spacing of the screws shall be sufficient to prevent splitting of the wood, or as required by Table 4 of this report, whichever is more restrictive. The top of the screw head shall be installed flush to the surface of the member being connected.

5.0 LIMITATIONS

The Simpson Strong-Drive® SDWC wood screws described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 The fasteners shall be manufactured, identified and installed in accordance with the manufacturer’s published installation instructions, this report, and the applicable code. A copy of the instructions shall be available at the jobsite continuously during installation. If there is a conflict between this report and the manufacturer’s published installation instructions, the more restrictive shall govern.

5.2 Calculations and details showing compliance with this report shall be submitted to the building official. The calculations and details shall be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.

5.3 Design and installation shall conform to Section 4.0 of this report.

5.4 Calculations and details showing compliance with this report shall be submitted to the building official. The calculations and details shall be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.
5.5 Use of fasteners in locations exposed to saltwater or saltwater spray is outside the scope of this evaluation report.

5.6 The SDWC wood screws are manufactured under a quality control program with inspections by IAPMO Uniform ES.

6.0 SUBSTANTIATING DATA

6.1 Data and test reports submitted are from laboratories in compliance with ISO/IEC 17025 and in accordance with the ICC-ES Acceptance Criteria for Alternate Dowel-type Threaded Fasteners (AC233), approved October 2018.

6.2 Data in accordance with the ICC-ES Acceptance Criteria for Corrosion-Resistant Fasteners and Evaluation of Corrosion Effects of Wood Treatments (AC 257), approved October 2009 (editorially revised March 2018).

7.0 IDENTIFICATION

The packaging for the SDWC wood screws is labeled with designation “Simpson Strong-Drive® SDWC15450 or SDWC15600”, the Simpson Strong-Tie Co. name and address, the fastener size, the IAPMO UES Mark of Conformity, and the IAPMO UES evaluation report number (ER-262). Each screw head is marked with the No-Equal to symbol (≠) and the numeric number “4.5 or 6” indicating screws length, as shown in Figure 1 of this report. A die-stamp label may also substitute for the label. Either Mark of Conformity may be used as follows:

For SI: 1 inch=25.4 mm, 1 psi=6.89 kPa, 1 lbf=4.45 N

1. For purposes of measuring overall fastener length, screw fasteners are measured from the top of head to bottom of tip.
2. Length of thread includes tip. Figure 1 of this report shows the location of dimensions.
3. Bending yield strength determined in accordance with methods specified in ASTM F1575 and based on the minor thread (root) diameter.
4. Allowable connection loads include consideration of fastener properties. Tables 3 and 4 of this report provide allowable reference lateral (Z), withdrawal (W) and pull-through design values for the screws in wood-to-wood connections.

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N

1. The connection conditions of this table are for specific intended applications. Reference lateral design values for all other shear connections shall be calculated in accordance with the NDS. Minimum fastener penetration into the main member shall be 1.0 inch.
2. The main and side members shall be wood having a minimum NDS referenced specific gravity of 0.50 for DF, 0.55 for SP and 0.42 for SPF and HF. Lateral table values for sawn lumber are also applicable for fasteners installed into structural composite lumber described in Section 3.2.2 of this report.
3. Reference lateral design values (Z) shall be multiplied by all applicable adjustment factors, including the load duration factor, $C_D$, from the NDS as referenced in the IBC or IRC.
4. Screws shall be installed into the side grain of the wood main member with the screw axis at a 90-degree angle to the surface of the member.
5. DF is Douglas Fir-Larch. SP is Southern Pine. SPF is Spruce-Pine-Fir.
6. Parallel to grain loading in the side member and perpendicular to grain loading in the main member.
7. Perpendicular to grain loading in the side member and perpendicular to grain loading in the main member, except for 2x (edge) where main member is loaded parallel to grain.
8. Specific gravities for each species combination are based on values in 2018 and 2015 ANSI/AWC NDS Table 12.3.3A (2012 ANSI/AWC NDS Table 11.3.3A).

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N

1. The reference withdrawal and pull-through values are in pounds per inch of the thread penetration into the main member and a minimum 1 1/2 inch thick side member, respectively.
2. The reference withdrawal and pull-through design values shall be multiplied by all applicable adjustment factors in the ANSI/AWC NDS, including the load duration factor, $C_D$, as referenced in the IBC or IRC.
3. Screws shall be installed into the side grain of the main member with the screw axis at a 90-degree angle to the surface.
4. Specific gravities for each species combination are based on values in 2018 and 2015 ANSI/AWC NDS Table 12.3.3A (2012 ANSI/AWC NDS Table 11.3.3A).
5. The reference withdrawal values shall be multiplied by the length of thread penetration in the main member. The length includes the threaded tip.
6. The reference pull-through values shall be multiplied by the length of thread penetration in the side member.
7. The main members shall be wood having a minimum NDS referenced specific gravity of 0.50 for DF, 0.55 for SP, and 0.42 for SPF and HF. Withdrawal table values for sawn lumber are also applicable for fasteners installed into structural composite lumber described in Section 3.2.2 of this report.
8. DF is Douglas Fir-Larch. SP is Southern Pine. SPF is Spruce-Pine-Fir. HF is Hem-Fir.

CSI Division: 06—Wood, Plastics and Composites
CSI Section: 06 05 23—Wood, Plastic, and Composite Fastenings

1.0 RECOGNITION

Simpson Strong-Drive® SDWC wood screws described in ER-262 and this supplemental report have been evaluated for use as dowel-type threaded and self-drilling fasteners in wood-to-wood connections. Simpson Strong-Drive® SDWC wood screws have been evaluated for structural and corrosion resistance performance properties, subject to the requirements in ER-262 and this supplemental report. Simpson Strong-Drive® SDWC wood screws were evaluated for compliance with the following codes and regulations:

- 2020 City of Los Angeles Building Code (LABC)
- 2020 City of Los Angeles Residential Code (LARC)

2.0 LIMITATIONS

Use of the Simpson Strong-Drive® SDWC wood screws recognized in ER-262 and this report supplement are subject to the following limitations in addition to the limitations shown in the ER-262:

2.1 Simpson Strong-Drive® SDWC wood screws shall be installed in accordance with the manufacturer’s published installation instructions and ER-262.

2.2 Construction details and specifications verifying compliance with the Simpson Strong-Drive® SDWC wood screws shall be indicated on the approved plans by the engineer of record. The details shall be approved by the structural plan check engineer at the time of application.

2.3 Reference lateral and withdrawal design values in ER-262 are for allowable stress design and shall be multiplied by all applicable adjustment factors specified in the ANSI/AWC NDS.

2.4 Structural members forming the connection shall be designed in accordance with the 2020 LABC.

2.5 When designing a connection, the structural members shall be checked for load-carrying capacity in accordance with Section 11.1.2 of ANSI/AWC NDS 2018 and 2015.

For additional information about this evaluation report please visit www.uniform-es.org or email us at info@uniform-es.org
