THERMOSEAL 5G AND THERMOSEAL HFO

CSI Section: 07 21 00 Thermal Insulation

1.0 RECOGNITION

Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations described in this report have been evaluated for use as thermal insulation. The physical properties, thermal resistance, surface burning characteristics and attic and crawl space installations were evaluated for compliance with the following codes and regulations:

- 2021, 2018, and 2015 International Building Code® (IBC)
- 2021, 2018, and 2015 International Residential Code® (IRC)
- 2023 Florida Building Code, Building (FBC, Building) – Supplement attached
- 2023 Florida Building Code, Residential (FBC, Residential) – Supplement attached

2.0 LIMITATIONS

Use of Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulation recognized in this report is subject to the following limitations:

2.1 The insulation and coating products shall be installed in accordance with the manufacturer’s published installation instructions, this evaluation report and the applicable code. If there are any conflicts between the manufacturer’s published installation instructions and this report, the more restrictive shall govern.

2.2 In accordance with Sections 4.5.1 and 4.5.2 of this report, the insulations shall be separated from the interior of the building by a code-complying thermal barrier or ignition barrier as appropriate.

2.3 The insulation shall not exceed the nominal density and thickness for the installation conditions described in this report.

2.4 During and after application, the insulation shall be protected from exposure to weather.

2.5 The insulation shall be installed by professional spray polyurethane foam installers certified by Thermoseal, Inc. or by the Spray Polyurethane Foam Alliance (SPFA).

2.6 Use of the insulation in areas of “very heavy” termite infestation probability shall be in accordance with 2021, 2018, and 2015 IBC Section 2603.8 or IRC Section R318.4, as applicable.

2.7 Labeling and jobsite certification of the insulation and coatings shall comply with the following code sections as applicable:

- 2021, 2018, or 2015 IBC Section 2603.2
- 2021, 2018, or 2015 IRC Section R316.2
- 2021, 2018, or 2015 IRC Section N1101.10.1.1
- 2021, 2018, or 2015 IECC Section C303.1.1.1 or R303.1.1.1

2.8 Foam plastic used in plenums as interior finish or interior trim shall comply with Section 2603.7 of the IBC.

2.9 The insulation shall be produced in Norwalk, Connecticut.

3.0 PRODUCT USE

Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations comply with IBC Section 2603, IRC Section R316, and IECC Sections C303, C402, R303, and R402. When installed in accordance with Section 4.0 of this report, the foam plastic insulation may be used in wall cavities, floor assemblies or ceiling assemblies, and/or in attics and crawl spaces as nonstructural thermal insulation material. Thermoseal 5G and Thermoseal HFO insulations are used in Type V construction under the IBC and in one- and two-family dwellings under the IRC.

4.0 PRODUCT DESCRIPTION

4.1 Properties: Thermoseal 5G and Thermoseal HFO are medium density, closed cell, spray-applied polyurethane foam plastic insulations in accordance with Section 3.1.1 and Table 1 of AC377. The insulations have a nominal in-place density of 2.0pcf (32.0 kg/m³). The two-component spray foam plastic is produced in the field by combining a polymeric isocyanate (Component A) and a polymeric resin (Component B). The liquid components shall be stored in 55-gallon (208 L) drums at temperatures between 70°F and 80°F (21°C and 27°C). When Component A and Component B are stored in factory-sealed containers at the recommended temperatures, the maximum shelf life is six months.
4.2 Thermal Resistance (R-Values): Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulation has thermal resistance (R-Value) at a mean thickness of 4 inches (102 mm) and a nominal density of 2.0pcf (32 kg/m³) as shown in Table 1 of this report.

For SI: 1 inch = 25.4 mm, 1°F·ft²·h/Btu = 0.176 K·m²/W.

R-Values are calculated based on tested K values at 1-inch and 4-inch thicknesses.

4.3 Surface Burning Characteristics: At a maximum thickness of 4 inches (102 mm) and a nominal density of 2.0 pcf (32 kg/m³), the Thermoseal 5G and Thermoseal HFO insulations have a flame spread index of 25 or less and smoke-developed index of 450 or less when tested in accordance with ASTM E84. Greater thicknesses, depending on the end use, are recognized when installed in accordance with this report.

4.4 Fire-Protective Coatings and Coverings: Fire protective coatings, for use as alternative thermal barrier assemblies, shall be in accordance with Table 2 of this report, as applicable, and installed in accordance with Section 4.5 of this report.

4.5 Installations: Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations shall comply with one of the following requirements:

- 2021, 2018, and 2015 IECC Sections C402.1 (prescriptive)
- 2021, 2018, and 2015 IECC Section R402.1 (prescriptive)

The manufacturer’s published installation instructions for Thermoseal 5G and Thermoseal HFO insulations and this report shall be available on the jobsite during installation. Where conflicts occur, the most restrictive governs.

Thermoseal 5G and Thermoseal HFO insulations shall be spray-applied on the jobsite using equipment specified in the manufacturer’s published installation instructions. The maximum in-service temperature for all areas shall not exceed the maximum temperature stated in the manufacturer’s published installation instructions. The insulation shall be sprayed onto a substrate that is protected and clean from any debris or weather-related conditions during and after application and shall not be used in electrical outlets or junction boxes or in contact with rain, water, or soil.

4.5.1 Thermal Barrier

4.5.1.1 Application with a Prescriptive Thermal Barrier: Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations at any thickness in ceiling cavities and in wall cavities shall be separated from the interior by an approved thermal barrier of minimum ½-inch thick (12.7 mm) gypsum wallboard or equivalent 15-minute thermal barrier. The thermal barrier shall comply with and be installed in accordance with IBC Section 2603.4 or IRC Section R316., as applicable.

4.5.1.2 Alternative Thermal Barrier Assemblies: Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations may be installed without a thermal barrier as defined in Section 4.5.1 of this report when installed in accordance with Table 2 of this report and as referenced in IAPMO UES ER-499.

4.5.2 Installation in Attics or Crawl Spaces: Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations may be installed in attics or crawl spaces when installed in accordance with this section (Section 4.5).

When installed in attics or crawl spaces where entry is made only for the service of utilities, Thermoseal 5G and Thermoseal HFO insulations may be installed in accordance with this section. Thermoseal 5G and Thermoseal HFO insulations need not be surfaced with a thermal barrier, however, such attic and crawl space areas shall be separated from the interior of the building by a thermal barrier in accordance with Section 4.5.1 of this report.

4.5.2.1 Installation Using a Prescriptive Ignition Barrier: When installed within attics or crawl spaces where entry is made only for the service of utilities, Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations, shall be covered with a prescriptive ignition barrier in accordance with IBC Section 2603.4.1.6 or IRC Sections R316.5.3 and R316.5.4, as applicable. The thickness of the spray foam is not limited when covered with a prescriptive ignition barrier.

Exception: The prescriptive ignition barrier may be omitted when installed in accordance with Section 4.5.2.2 of this report.

4.5.2.2 Installation Using an Alternative Ignition Barrier Assembly: Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulations may be installed in attics and crawl spaces using an alternative ignition barrier assembly provided:

a. Entry is only to service utilities in the attic or crawl space and no storage is permitted.
b. Attic or crawl space areas shall not be interconnected.
c. Air from the attic or crawl space shall not be circulated to other parts of the building.

d. Attic ventilation is provided as required by 2021 and 2018 IBC Section 1202.2, 2015 IBC Section 1203.2, or IRC Section R806 except where air-impermeable insulation is permitted in unvented attics and shall comply with the following code sections as applicable:

For Unvented Attics:
- 2021 and 2018 IBC Section 1202.3
- 2015 IBC Section 1203.3
- IRC Section R806.5

Crawl space ventilation is provided as required by the following code sections as applicable:
- 2021 and 2018 IBC Section 1202.4
- 2015 IBC Section 1203.4
- IRC Section R408.1

e. The foam plastic insulations are limited to the maximum thickness and density tested as shown in Section 4.5.2.2.1 of this report.

f. In accordance with the Uniform Mechanical Code (UMC) Section 701.1 or IMC (International Mechanical Code®) Section 701, combustion air is provided.

4.6 Vapor Retarder: Thermoseal 5G and Thermoseal HFO closed-cell spray-applied polyurethane foam insulations have a vapor permeance of 0.45 perm, when applied at a minimum thickness of 2 inches (51 mm) and qualifies as a Class II vapor retarder as defined in IRC Section R202.

5.0 IDENTIFICATION

The spray foam insulation is identified with the following:

- Manufacturer’s name (Thermoseal Inc.)
- address and telephone number,
- the product trade name (Thermoseal 5G or Thermoseal HFO)
- use instructions
- density, flame-spread and smoke-development indices
- date of manufacture or batch/run number
- thermal resistance values
- the evaluation report number (ER-698)
- the name or logo of the inspection agency

Either IAPMO UES Mark of Conformity may also be used as shown below:

6.0 SUBSTANTIATING DATA

6.1 Data in accordance with the ICC-ES Acceptance Criteria for Spray-applied Foam Plastic Insulation, AC377, dated June 2023, including Appendix X.

6.2 Flammability Testing to NFPA 286, Standard Methods of Fire Tests for Evaluation Contribution of Wall and Ceiling Interior Finish to Room Fire Growth

6.3 Data in accordance with ICC 1100, Standard for Spray-applied Foam Plastic Insulation.
6.4 Test Reports are from laboratories in compliance with ISO/IEC 17025

7.0 STATEMENT OF RECOGNITION

This evaluation report describes the results of research carried out by IAPMO Uniform Evaluation Service on Thermoseal 5G and Thermoseal HFO to assess conformance to the codes and standards shown in Section 1.0 of this report and documents the product’s certification. Thermoseal 5G and Thermoseal HFO spray-applied polyurethane foam plastic insulation was manufactured at the location noted in Section 2.9 of this report under a quality control program with periodic inspection under the supervision of IAPMO UES.

THERMOSEAL 5G AND THERMOSEAL HFO CLOSED CELL SPRAY-APPLIED FOAM PLASTIC INSULATIONS

CSI Section:
07 21 00 Thermal Insulation

1.0 RECOGNITION

The Thermoseal 5G and Thermoseal HFO closed cell spray-applied foam plastic insulations as evaluated and represented in IAPMO UES Evaluation Report ER-698 and with changes as noted in this supplement is a satisfactory alternative for use in buildings built under the following codes (and regulations) including locations in the High-velocity Hurricane Zone:

- 2023 Florida Building Code, Building, (FBC, Building)
- 2023 Florida Building Code, Residential (FBC, Residential)

2.0 LIMITATIONS

Use of Thermoseal 5G and Thermoseal HFO closed cell spray-applied foam plastic insulation recognized in this report is subject to the following limitations:

2.1 The clearance between the foam insulation installed above grade and exposed earth shall be in accordance with Section 2603.8 of the FBC, Building or Section R318.8 of the FBC, Residential.

2.2 Verification shall be provided that a quality assurance agency audits the manufacturer’s quality assurance program and audits the production quality of products in accordance with Section (5)(d) of Florida Rule 61G20-3.008. The quality assurance agency shall be approved by the Commission (or the building official when the report holder does not possess an approval by the Commission).

2.3 This supplement expires concurrently with ER-698.
